Uninsulated Roller Shutter

for the production of fire resistant uninsulated metal based roller shutter door in accordance with the test report ref: 192095

This schedule covers the performance of a type of roller shutter door manufactured by A1S Group, fitted with a tubular motor. The shutter is designed to be used in openings within masonry/concrete constructions and fire protected steel structures up to 2.5m wide by 2.4m high and fire resistance periods up to 240 minutes (4 hours).

This schedule must be read in conjunction with the above mentioned test report and all aspects of the specification and limitations defined therein must be satisfied. Failure to comply with all specifications will invalidate the approval, and may jeopardise the fire performance.

Ian Woodhouse
Director

Date: 6th October 2017
