

# Product Certification

Having your products certified to EU, UK, US standards by **IFC Certification Ltd (IFCC)** helps you to market and sell your products in an increasingly competitive marketplace.

**IFC Certification Ltd (IFCC) provides affordable, customer focused, independent third party certification of fire protection products. This type of approval is recognised as the highest level you can obtain for your products.**

IFC Certification Ltd's quality mark is accredited by UKAS. It is designed for you to demonstrate the superiority of your products over those which are not subject to such stringent approval processes. Certification covers initial type testing and includes procedures to demonstrate that subsequent production will also have the same performance, delivering increased product confidence.

IFCC product certification schemes complement the IFCC schemes for the certification of installers. Together they provide a system to give confidence to specifiers, contractors, enforcement authorities, regulators, end clients and building users that proven products, together with good installation, will achieve the required level of fire performance.

***... confidence in  
fire safety***

## The certification process

IFCC evaluates products by a process of type testing, audit testing and assessment against defined criteria that establish a field of application to help ensure that products are specified and used within their approved scope.

Testing is normally conducted against British (BS) or European (EN) standards; Products can also be tested against North American Standards (including UL, ANSI, NFPA) where required, with other international or industry standards used to suit your particular requirements.

To ensure traceability and consistency of production, IFCC regularly audits the manufacturer's factory production control processes.

Certificated products are required to be labelled to ensure traceability, even in completed buildings. All certificated products and company details are listed in our online Register at [www.ifccertification.com](http://www.ifccertification.com)

## Product schemes

IFCC's certification schemes are developed in close liaison with stakeholders to ensure they meet the industry's needs. The following schemes are currently available, with more under development:

- Fire resistant timber doors
- Fire resistant metal doors
- Fire resistant composite doors
- Fire resistant glass and glazing
- Fire and smoke control door edge seals
- Structural steelwork fire protection; boards, sprays, intumescent coatings
- Building hardware; hinges, door closers, locks and latches, exit devices
- Smoke curtains
- Fire curtains
- Fire rated ducts
- Fire rated dampers
- Smoke & heat exhaust ventilation
- Penetrations, linear gap seals, cavity barriers (fire stopping)
- Low flame spread products
- Enclosures
- Portable (modular) buildings
- Partition systems

For further details of all our schemes and other certification services or to discuss your individual requirements please contact:
